

Environmental Education Standards

Early in 2000, the Illinois Environmental Education Advancement Consortium (IEEAC) was challenged with reviewing the Illinois Learning Standards to identify benchmarks that addressed environmental education. In 2005, the group was challenged to look at the Science and Social Studies descriptors and identify those that addressed environmental education. Since IEEAC members believe that environmental education follows a scope and sequence of learning, we wanted to critically review each benchmark to find the correlations. The rubric chosen to complete the correlation was developed by the North American Association of Environmental Education's National Project for Excellence in Environmental Education Guidelines for Learning (K-12).

The benchmarks and descriptors identified in green are those that scored well against the rubric and when used will address environmental education. Many of the benchmarks and descriptors develop skills that are critical to an environmentally literate student. Some of these benchmarks and descriptors, however, did not score well against the rubric and are not marked as an EE benchmark. Other benchmarks and descriptors could easily be taught using the environment as the unifying context but did not score well against the rubric. Note that there are benchmarks that address EE in every core area.

The benchmarks and descriptors identified as EE were reviewed as they are written, without connection to any specific activity or lesson.

For the sake of this project, IEEAC used the definition of environmental literacy as stated by the North American Association for Environmental Education's National Project for Excellence in Environmental Education Guidelines for Learning (K-12). The definition was developed by thousands of environmental educators. That statement reads:

Environmental Education is a process that aims to develop an environmentally literate citizenry that can compete in our global economy, that has the skills, knowledge, and inclination to make well-informed choices concerning the environment, and that exercises the rights and responsibilities of members of a community.

To be effective, environmental education programs should include subjects related to: 1) knowledge of environmental processes and systems, including the Earth as a physical system, the living environment, humans and their societies, and environment and society; 2) questioning and analysis skills; 3) environmental issues investigation skills; 4) decision and citizenship skills; and 5) personal and civic responsibility.
